

User Requirements Document (URD)

1. Introduction Smart Save

1.1 Purpose

This document outlines the user requirements for the Smart Save app, focusing on the needs of young professionals, freelancers, and small business owners. It serves as a bridge between the business objectives defined in the Business Requirements Document (BRD) and the technical implementation phase.

1.2 Scope

Covers:

- User account management (registration, login, security)
- Bank integration & transaction tracking
- Savings & budgeting features
- AI-driven insights & notifications
- Reporting & analytics

1.3 Target Audience

- Young professionals (22-35 years)
- Freelancers
- Small business owners

1.4 Smart Save User Requirements Table

User Req ID	User Requirements (User Goals)	Use Case	Priority	Young Professionals	Freelancers	Small Business Owners	Acceptance Criteria (Given-When-Then)	Comments
Account Management								
UR-01	Create account using email/phone	User registration	Must Have	✓	✓	✓	Given a new user, when they enter a valid email/phone and a password (min. 8 chars, alphanumeric), then the account is created and a confirmation email/SMS is sent.	Password min. 8 chars, alphanumeric.
UR-02	Enable two-factor authentication (2FA)	Security setup	Must Have	✓	✓	✓	Given a logged-in user, when they enable 2FA via SMS or an authenticator app, then all future logins require the second factor.	SMS or authenticator app.
UR-03	Reset forgotten password	Password recovery	Must Have	✓	✓	✓	Given a user requesting a password reset, when they click the email/SMS link (expires in 24h), then they can set a new password.	Email/SMS link expires in 24h.
Bank Integration & Transactions								
UR-04	Link one primary	Bank connection	Must Have	✓	✓	✓	Given a user, when they connect a bank account via	MVP supports 1 account.

	bank account						Open Authorization/API, then transactions sync within 5 minutes.	
UR-05	Automatically categorize transactions	Spending tracking	Must Have	✓	✓	✓	Given a new transaction, when it is imported, then it is categorized with 90% accuracy (e.g., Food, Bills).	90% accuracy threshold.
UR-06	Manually edit transaction categories	Data correction	Should Have	✓	✓	✓	Given a categorized transaction, when the user edits the category, then the change persists and overrides auto-categorization.	Override auto-categorization.
Savings Features								
UR-07	Set automated savings rules (e.g., round-ups)	Savings automation	Must Have	✓	✓	✗	Given a user, when they enable round-ups, then spare change is saved after each transaction.	Disabled for biz owners in MVP.
UR-08	Receive AI-driven savings suggestions	Personalized savings	Must Have	✓	✓	✗	Given 30+ days of transaction history, when the AI analyzes spending, then weekly suggestions are provided via in-app notifications.	Requires 30+ days of history.
UR-09	Create/track multiple savings goals	Goal management	Must Have	✓	✓	✓	Given a user, when they set a savings goal, then progress is displayed with a visual bar (e.g., "Vacation fund: 60%").	Visual progress bars.

Budgeting Tools								
UR-10	View personalized budget recommendations	Budget setup	Must Have	✓	✓	✓	Given income/spending patterns, when the user views the budget page, then recommendations are displayed within 2 seconds.	Based on income/spending .
UR-11	Receive overspending alerts	Budget alerts	Must Have	✓	✓	✓	Given a budget category, when spending reaches 80% of the limit, then an alert is sent via app notification.	Threshold: 80% of budget limit.
UR-12	Automatically adjust budgets	Adaptive budgeting	Should Have	✓	✓	✗	Given actual spending trends, when the month ends, then next month's budget limits are adjusted $\pm 10\%$.	Adjusts based on spending.
AI & Notifications								
UR-13	Ask basic questions via AI chatbot	FAQ support	Could Have	✓	✗	✗	Given a user query, when it matches a pre-defined FAQ, then the chatbot responds instantly with the answer.	MVP: Pre-defined answers only.
UR-14	Receive weekly spending summaries	Email reports	Must Have	✓	✓	✓	Given a user, when it is Monday, then an email with spending breakdowns is sent by 9 AM.	Sent every Monday.
UR-15	Celebrate savings milestones	Positive reinforcement	Should Have	✓	✓	✗	Given a savings goal achievement, when the goal is	Notification format: "Congrats! You

							met, then a congratulatory push notification is sent.	saved \$500 for your vacation!"
Reporting								
UR-16	Export financial reports (PDF/CSV)	Data export	Should Have	✗	✓	✓	Given a user, when they request a report, then the PDF/CSV generates within 10 seconds and downloads.	For freelancers/business tax purposes.

1.5 Non-Functional Requirements (NFRs)

Category	Requirement	Acceptance Criteria
Performance	Dashboard load time ≤ 3 seconds	Given a logged-in user, when they open the dashboard, then it loads in ≤ 3 s.
Scalability	Support 10,000 concurrent users	Given peak traffic, when 10,000 users are active, then response times remain ≤ 5 s.
Usability	- Intuitive UI (90% task success rate) - Mobile-first design - Error prevention & recovery	- Given a new user, when they perform core tasks (e.g., setting a budget), then 90% complete them without help documentation. - Given a mobile user, when they access the app, then all buttons/forms are tappable (min. 48x48px) and layouts adapt to screen size. - Given a user action (e.g., deleting a goal), when irreversible, then a confirmation dialog appears with undo options for 5 seconds.
Security	- Data encryption (AES-256) - Strong password policy Session timeout	- Given stored user data, when transmitted or at rest, then it is encrypted with AES-256. - Given a user creating a password, when they submit it, then it must be validated to be at least 12 characters, containing upper/lowercase letters, a number, and a symbol. Given an authenticated user, when they are inactive for 15 minutes, then their session is invalidated and they must re-authenticate.

	• Prevent concurrent sessions • Audit logging	• Given a user, when they log in from a new device, then any existing sessions from other devices are terminated. • Given any action (logins, transactions, edits, exports), when it is performed by a user, then a timestamped, user-stamped, and unchangeable log entry is created.

Key

- Priority: Must Have (MVP), Should Have (Post-MVP), Could Have (Future Features)
- Stakeholders:
 1. ✓ = Required
 2. ✗ = Excluded (e.g., freelancers don't need payroll features)

1.5 Approval
